

Indicator Maturity Score Rubric

SCORE	MEANING
0	Indicator not implemented
1	General planning exists, but implementation not started
2	Partially implemented, the indicator is implemented on a limited scale (e.g. selected areas) basic functionality exists but limited coverage
3	Indicator is implemented and operational but there are gaps in coverage and integration, needs further improvement
4	Indicator is implemented with good performance
5	Fully implemented, optimized, and continuously improved

Evidence Quality Score Rubric

SCORE	EVIDENCE QUALITY	MEANING
0	No evidence	No source or supporting material available
1	Weak evidence	General description, announcement, or unsupported claim
2	Moderate evidence	Public document, project page, report, or dataset reference
3	Strong evidence	Measured data, dashboard, API, evaluation report, or official document
4	Verified evidence	Evidence reviewed by expert, stakeholder, or project owner

Data readiness rubric

LEVEL	MEANING	
0	No data	There is no source at all, not even a manual one.
1	Unstructured data	Data exists but is stored in unstructured format, requires manual extraction or cleaning before it can be used (PDFs, paper records, manual documents)
2	Structured but static	Data exists in a usable structured format but isn't updated frequently, it does not refresh on its own (database snapshots, spreadsheets)
3	Structured and live	Data exists in a usable format and is updated frequently (APIs, automatically updated systems)

Gap Severity Calculation

The gap severity should calculate how far the project is from the desired/target maturity. To calculate the gap, we subtract the target maturity from the current maturity score.

Gap severity = Target maturity – Current maturity

Priority Score Formula

The priority score should calculate the importance of addressing the gap.

Suggested formula:

Priority score = Gap Severity + Indicator Importance + Evidence Risk + Data Readiness Need + Expected Impact – Implementation Effort

*Initial Priority score formula used:

Priority score = Gap severity
